

How to hide OneDrive in the File Explorer Sidebar:

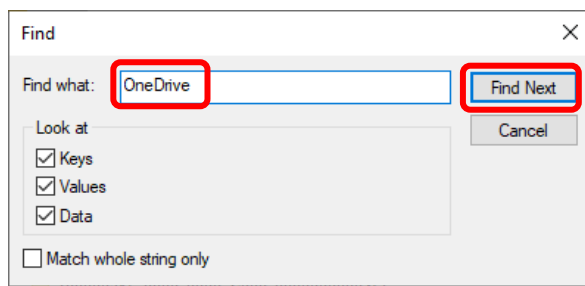

1. Press **Win + R** → type **regedit** → Enter.

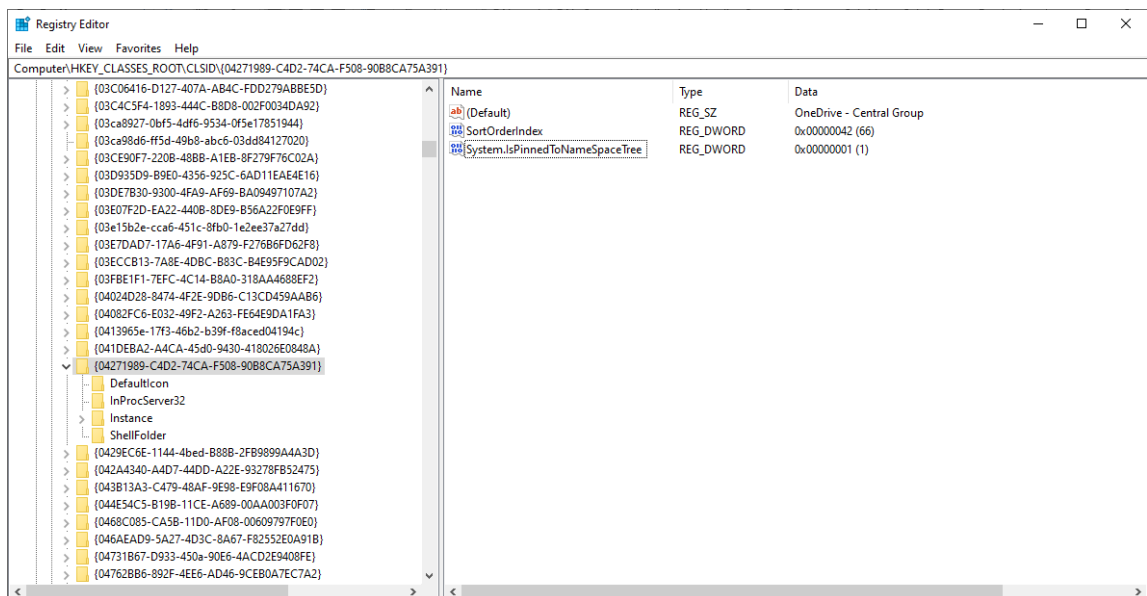

2. Click **HKEY_CLASSES_ROOT** and look for **CLSID**.

3. Right click **CLSID** and click **Find**.

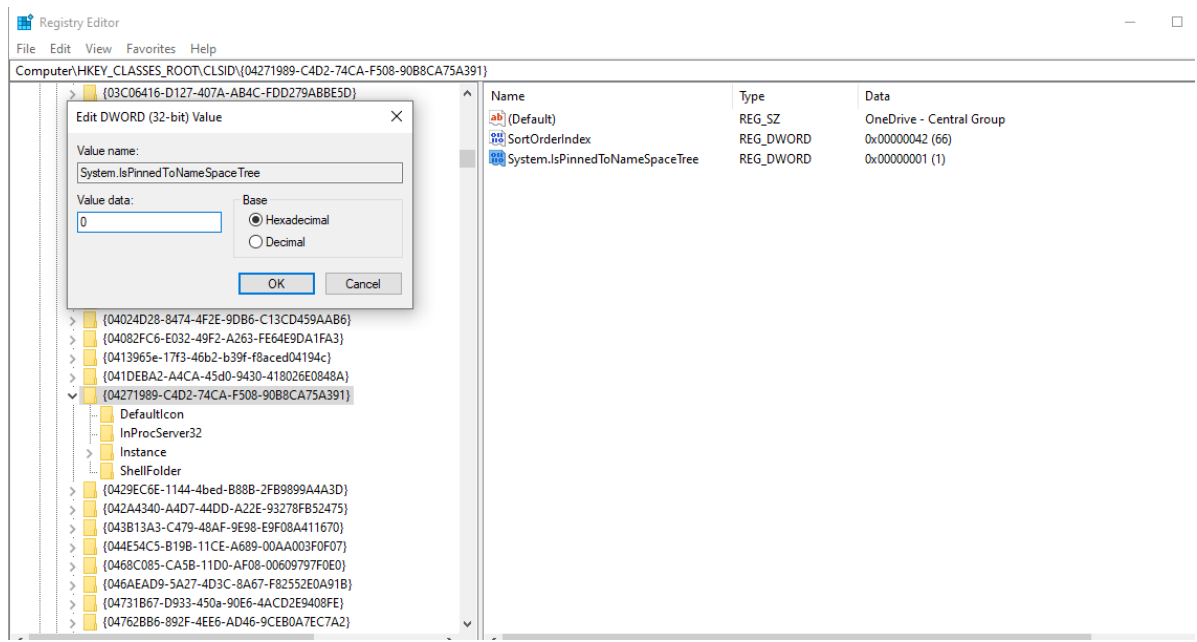

4. Search **OneDrive** and klik **Find Next**.

5. Search until you find **System.IsPinnedToNameSpaceTree**, by pressing the **F3** key.

6. Right click **System.IsPinnedToNameSpaceTree** and change the **Value Data** to 0.

7. NOTE : *If you have changed it but the sidebar that is missing is not the OneDrive you want, you can change the Value Data back to 1 and press F3 again to search for the next OneDrive. And do the same thing as method number 6.*

- Thank you -
